How to Identify If You Have a Butler Building

How do you know you have a Butler Building? Butler Parts Online is an authorized supplier of Butler building components only. We do not carry panels from other building manufactures. We therefore want to make certain that we are not wasting the time of our customers with discussion over parts that we cannot supply. To help facilitate an efficient transaction, we would like to help our prospective customers determine if they, indeed have a Butler building in need of parts.

- **The first place to look is at the building ridge or at some location along one of the gable trim locations.** There should be a building emblem panel. Butler's emblem looks something like this:
- **Another method for determining whether or not the building is a Butler building is to look at the wall or roof panel profile.** There are certain dimensions of these panels that will help determine if the building is a Butler building. For example, the flute of the Butlerrib II wall panel is a full 1 1/2" deep. There are no other ribbed wall panels on the market that are more than 1 1/4" deep. You can check the profile of the panel on our website (see panel profiles) to determine if you have a match.

There are other ways to determine if the building is a Butler building. It is important to note that, even if you have determined that you have a Butler building, there may be obsolete panels and parts that we will not be able to supply.

MOST PARTS FOR BUTLER BUILDINGS BUILT BETWEEN 1940 & 1959 ARE OBSOLETE. ADDITIONALLY, THE BUTLER

RIB PANEL ON BUILDINGS BUILT BETWEEN 1960 & 1969 ARE OBSOLETE
